```
program {
def int 10a ;
def int b ;
def int c ;
def int sol = 0 ;
def int delta = a ^ 2 - 4 * b * c;
check ( delta < 0 ) then
   print ( " "Unsolvable!" )
else
   check ( delta == 0 ) then
       sol = -b / ( 2 * a ) ;
       print ( "Solution1:" + sol ) ;
   else
        sol = ( â€”b + sqrt ( delta ) ) / ( 2 * a ) ;
        print ( "Solution1:" + sol ) ;
        sol = ( â€”b â€” sqrt ( delta ) ) / ( 2 * a ) ;
        print ( "Solution2:" + sol ) ;
}
```
